

OPCOM® successfully reduce the risk of death

link to scope infections

Booth No: 8A P39 | **Messe Duesseldorf GmbH, Duesseldorf, Germany** | 14-17 Nov.

The endoscope for medical uses plays an important role in health care and minimally invasive surgery. However, re-use of endoscopes and inadequate cleaning procedures compromise sterility and may cause life-threatening infections for the patient. To address this issue, OPCOM focused on developing single-use endoscopes in efforts to minimize the risk of cross-contamination and hospital-acquired infections. OPCOM developments have allowed the manufacture of endoscopes inexpensive enough to be used on a single patient only. To protect people avoid life-threatening infections OPCOM is a global pioneer in digital imaging and lighting solutions as well as ISO 9001/14001/13485/TS 16949-certified manufacturer for Medical applications. OPCOM has since then delivered more than 100-million camera modules to worldwide industrial sectors and hundreds of thousands of medical camera modules for Medical uses, and 7 ODM medical products have passed FDA certification.

OPCOM Medical has 3 product line:

EndoLite – the smallest and the brightest EndoLite

EndoCam –the extremely small size EndoCam with high resolution

EndoScope –Customized EndoScope , including home used EndoScope and Vetscope.

Vertical integration, merging CMOS sensor wafer technology designed by Japan and OPCOM's optics molding glass, plastic lens facility development in class 10 certification clean room. Mass production line with 6 Million pcs/ month capacity.

OPCOM is the best single-use endoscopes supplier in the world.

For more information , please visit our booth 8A P39, COMPAMED. We look forward to seeing you. To cooperate with you and achieve a significant penetration in the market.
